

SAND MINE SOLUTIONS

As your partner, we will examine your current chemistry and process, and recommend a cost reduction plan.

► PARTNERSHIP

Hydrite Chemical Co. offers a broad range of products to the sand mine industry for water clarification, sludge dewatering, pH adjustment, and much more. Our full line of coagulants and polymers are tested for your specific application by our water treatment experts. We aim to optimize all aspects of your chemical feed system by implementing the best chemistry and equipment technology available. Take advantage of our free in-house bench testing to find out what products work best for you.

Hydrite Chemical Co.'s strength lies with the technical capacity of our people and the experience they bring to our organization and ultimately, yours. With each employee fully supporting our mission of continuous profit improvement, we are able to give you the technical expertise, innovative science, and personal attention you deserve. We take time to listen and understand your processes completely and work with you at every step to offer solutions that improve quality and production efficiency.

► BENEFITS

- Local warehousing in La Crosse and Wausau, WI for quick, cost effective deliveries.
- Routine service visits and ongoing jar testing to help maintain optimum use of products and to consistently evaluate new products as they become available.
- Operator training with instructions for troubleshooting and chemical feed optimization.
- Empty tote and drum return program to Hydrite. Deliveries are made with Hydrite fleet so empties can be picked up at the same time as deliveries.
- Local representation for rapid response. The local team consists of your sales rep and a waste water treatment technical support rep. Three additional waste water technical support personnel work together to provide in-depth coverage so there is always someone available to provide support.
- Technical support staff recommends chemical feed and monitoring equipment to get the most out of every pound of chemical we deliver.
- Waste disposal services for products that cannot go into your dumpster.
- Services of Hydrite Regulatory Affairs personnel for regulatory issues.

For more information on how Hydrite Chemical Co. can help your organization, call 262-792-1450.

Providing Creative Solutions

Hydrite Chemical Co. has an extensive line of chemicals well suited for your sand mine process.

WATER TREATMENT CHEMISTRY

- **Hydriclear coagulants** - Highly charged, water soluble, organic cationic coagulants designed to perform in a variety of difficult treatment conditions. Used as a clarification aid and for sludge dewatering.
- **Hydrifloc polymers** - High molecular weight, water soluble flocculant polymers. Designed to increase floc density, enhance clarity, improve settling characteristics and dewater sludge.
- **Hydrite 1066** - Acidic product designed to reduce pH in aqueous environments.
- **Hydrite 1050** - Alkaline product designed to neutralize pH in acidic aqueous environments.

We look forward to partnering with you to meet your water quality needs.
